Shadow effects
Positive and negative examples

Positive

- Shadow effect is used consistently for the title box of the text field and the text field itself

- Boxes have no outlines, so there is no interference with the shadow effect

- Text field is white, so the shadow effect has the maximum use

Negative

- Shadow effect is used inconsistently: Effect is applied to the text field, but not to the title box above

- Text field has an outline, so the shadow effect is redundant. Outline and shadow combined look overdone.

- Text field is not white, so the shadow effect is of limited use / unnecessary
