

# Text boxes

## Positive and negative examples

### Positive

Text box has a separate smaller box on top of it which contains the heading

Text box has no outline, which looks just cleaner and better

Left, right, upper and lower margins were set at 0,16, so the text is not squeezed against the margin of the text box

All other settings are applied as described as in the post „Text boxes“

### Negative

No separate box for the heading, heading is in the same box as the text.

Text box has an outline, which is redundant and looks just bad

Left, right, upper and lower margins were not set (or set at 0, respectively), so the text is squeezed against the margins of the shape

All other settings are applied as described in the post „Text boxes“
